Excerpt: . was patterned after it), and was the first that could be used for all liquids. In the fifth paper Fahrenheit describes his invention of the thenno-barometer, based on the fact that the boiling-boint of water is influenced by barometric pressure. Boyle had observed the lowering of the boiling-point under the receiver of the air-pump, but Fahrenheit was the first to discover the principles of hypsometry. Fahrenheit s publications are few in number and very brief, but they show him to have been an original thinker, and his great mechanical skill in working glass enabled him to carry out his designs. His account of the thermometer is of so great interest that I give it entire. The thermometers constructed by me are chiefly of two kinds, one is filled with alcohol and the other with mercury. Their length varies with the use to which...
